Contents

Chapter 1

Bookdown Playground

Welcome to my Bookdown Playground!

1.1 `index.Rmd`

This is the content of the `index.Rmd` file in the root of the repo.

Chapter 2

Nested subdataset

2.1 `test.Rmd`

This is the content of the `subdataset/test.Rmd` file in the root of the `/subdataset` repo (which is the same repo but just nested as a DataLad subdataset, aka. `git submodule`).

According to this Travis CI documentation . . .

> Travis CI clones Git submodules by default

Importantly, the subdataset needs to be added using `https` and not `ssh`, i.e., I used:

```
datalad clone --dataset . https://github.com/lnnrtwttkhn/bookdown-playground-subdataset.git subda
```

Edit Actually, in this I create the subdataset locally first using `datalad create -d . -c text2git subdataset` and then added the GitHub remote `origin` afterwards using `datalad siblings add -s origin --url https://github.com/lnnrtwttkhn/bookdown-playground-subdataset.git`.
